### Assignment Three - tip calculator with loops
### Author: James Baierski
```

```
print('Tip Calculator')
print(' ') #spacing
```

```
while True:
    cost_of_meal = float(input("Cost of meal: "))
    print(' ') #spacing
    for tip_percent in (15,20,25):
        tip = cost_of_meal * (tip_percent / 100)
        total = round(cost_of_meal,2) + round(tip,2)
        print('Tip Precent :', tip_percent,'%')
        print("Tip Amount: ", round(tip,2))
        print('Total Amount: ', round(total, 2))
        print(' ') #spacing
    yes = input('Continue (y/n)?:' )
    print('') #spacing
    if yes != 'y': # was having issues with (yes != y or yes != Y). Was not
giving me the correct result so i left it as a single condition
        break
    else:
        continue
print("Bye!")
```
