Problem 1.

Code a SELECT statement that shows all book titles published by Sunshine Publishers and All Techo Books but only for books that have sold more than 5000 books.

Sort results in publisher name order and in title order within each publisher.

```
SELECT name,title
FROM publisher JOIN book USING(pub_id)
WHERE (name ='Sunshine Publishers' OR name = 'All Techo Books' ) AND ytd_sales
>5000
ORDER by 1 , 2;
```

Problem 2.

Code a SELECT statement that shows all authors who live in Oakland, California and are based in the same state as one of the publishers.

The SELECT list should display the following: The publisher's name and city, the author's name, city, and state.

Sort columns in the same order shown in the SELECT list.

```
SELECT name, p.city ,firstname, lastname, a.city, a.state
FROM publisher p JOIN author a
ON p.state = a.state
WHERE (a.city = 'Oakland' AND a.state = 'CA') OR p.state = 'CA'
ORDER by 1, 2, 3, 4, 5, 6 ;
```
